(54) Title: CIRCUIT, APPARATUS AND METHOD FOR STORING AUDIOVISUAL DATA

(57) Abstract: Bit-rate scalable
compression for storing A/V
information in a pause buffer of a
digital video recorder, providing a
viewer of a live program to take a
delayed decision about whether or
not to record the program while still
viewing the "live" program at full
quality, i.e. at a higher quality than
the quality at which it will be stored,
whereby only the "enhancement
layers" need to be stored in the
buffer, whereby since the bit rate of
these layers is significantly lower
than the bit rate for the complete
compressed data, the capacity
(minutes of recording time) of the
buffer is significantly increased.
